Fundamentals of Machine Learning

Business Continuity Management - Awareness Training

Fundamentals of Structured Streaming

Fundamentals of Lakehouse Architecture

Mas Agung Denisa Bekam

Full-Stack Engineer | Node.js, Next.js, Python | Building Scalable Web & Data Solutions

Bali, Indonesia

Summary

From the data pipeline to the pixel, I bridge the gap between complex enterprise architecture and intuitive user experiences.

As a Lead Full-Stack Engineer and former Assistant Professor, I don’t just build applications—I translate technical complexity into business value. Whether it’s migrating legacy systems to modern Next.js architectures or optimizing massive data flows, I focus on scalability, security, and the human at the other end of the screen.

Key Impact Areas:
* Front-End Excellence: Spearheaded the ground-up rebuild of the PayEZ platform, migrating from AEM to a high-performance Next.js & Storybook architecture.
* Data & Back-End Engineering: Engineered a core Datamart migration to Azure Databricks (PySpark), slashing data processing cycles from weeks to hours and drastically reducing operational costs.
* Security-First Mindset: Led 3 major enhancement cycles with rigorous penetration testing (EY, Accenture) and automated vulnerability scanning using Snyk & Veracode.
* Technical Leadership: I thrive on mentoring cross-functional teams and explaining complex engineering concepts to non-technical stakeholders in English, Indonesian, or Hokkien.

Experience

HeyRCG!

Full Stack Engineer

March 2026 - Present (6 months)

Australia

- Infrastructure & Performance: Architected and scaled cloud infrastructure on Google Cloud Platform (GCP) for tmrwlabs.io and the Australian Dairy Farmers Corporation PNS System.

- Security & Hardening: Enhanced application security posture by actively monitoring and resolving vulnerabilities via CVE (Common Vulnerabilities and Exposures) tracking, successfully hardening infrastructure against potential threats.
- Technical Strategy: Acted as a strategic technical advisor, evaluating system requirements to design and implement best-fit architectural solutions that aligned with long-term business goals.
- Full-Stack Development: Leveraged Vue.js and NestJS to design, develop, and maintain robust full-stack applications, including a secure and high-performing WiFi Portal for TMRW LABS.

AI WorkLabs
Co-Founder & CTO
January 2025 - Present (1 year 8 months)
Indonesia

- Lead technology strategy, product development, and IT operations.
- Manage client tech requirements, ensuring solutions align with business goals.
- Oversee all technical aspects, from architecture to deployment.
- Lead and mentor engineering team, fostering innovation and collaboration.
- Collaborate with stakeholders to align technology with company growth objectives.

AIA
Engineer/Analyst Fullstack ReactJS
April 2022 - February 2026 (3 years 11 months)
Singapore

- Managed the PayEZ payment gateway, leading the implementation of new enhancements and features includes all bugs fixing, security improvements, and analyst the system through new requirements.
- Enhanced the UI/UX of a HealthCare project, ensuring alignment with detailed requirements.
- Directed the redesign of the PayEZ UI/UX, adhering to Digital Design Standard (DDS) requirements.
- Improved application performance and security by conducting thorough penetration testing on the PayEZ platform (EY, Black Duck, and Accenture).
- Collaborated with HumanableCX to create custom welcome webpages for new customers.
- Led the Frontend development for the PayEZ Elevate Project.

- Provided support and contributed to the integration of PayEZ within the AIA+ Singapore applications.
- Integrated a feedback review system into the PayEZ platform to enhance user experience.
- Built a ChatGPT-like AI tool using Chainlit for internal use purposes.
- Integrated Adobe Analytics Tagging within PayEZ.
- Integrated UOB TMRW, OCBC payment method inside of PayEZ
- Handled with care all relate business parts of PayEZ (User Business, Internal Security, Enterprise Governance, Risk and Compliance)

PT. Timedoor Indonesia
Programming Teacher
July 2021 - March 2023 (1 year 9 months)
Bali, Indonesia

- Instructed an intermediate-level course on Vanilla JavaScript and Phaser3, focusing on game development techniques.
- Instructed pro-level course on Full-stack (Frontend, Backend, Database), focusing on apps development e2e flow.
- Taught website development using HTML, CSS, and JavaScript, emphasizing best practices in front-end design.
- Delivered training on mobile development with React Native, guiding students through the creation of cross-platform applications.
- Provided an introduction to artificial intelligence, utilizing Python libraries such as Keras, NLTK, TensorFlow, SciKit-Learn, and EasyOCR to teach foundational concepts and practical applications.

AIA Singapore
Data Engineer
May 2021 - April 2022 (1 year)
Singapore

- Contributed to the migration of Datamart to Azure Databricks, optimizing data storage and processing.
- Converted PL/SQL stored procedures to Azure Databricks, leveraging SparkSQL and PySpark for improved performance and scalability.
- Developed data pipelines using Azure Data Factory for efficient data integration.
- Migrated the PayEZ payment gateway from Java to Next.js, enhancing the application's performance and maintainability.
- Created and documented components using Storybook, ensuring thorough testing and consistency.

- Extracted and transformed Autosys job definitions to create new JIL scripts, streamlining job scheduling processes.

Yayasan Perguruan Sutomo
Computer Teacher
July 2018 - June 2021 (3 years)
Medan

Universitas Mikroskil
Assistant Professor
July 2018 - May 2021 (2 years 11 months)
Medan

Education

Hacktiv8 Indonesia
Graduate, Fullstack Javascript · (November 2020 - March 2021)

Universitas Mikroskil
Bachelor's degree, Informatics Engineering · (July 2016 - July 2020)
